Description

Passing strings to timers (`setTimeout`/`setInterval`/`setImmediate`) executes them like `eval`, enabling JavaScript injection when the string is attacker-influenced.

Recommendation

Pass a function or arrow callback to timers instead of building executable strings.

Description

Appending nodes built from untrusted input can enable DOM XSS or DOM clobbering. While `appendChild` is not inherently unsafe, review the origin of the node being appended.

Recommendation

- Prefer `textContent` for text insertion.
- Create nodes via `document.createElement` and set attributes safely (avoid setting `innerHTML` on them).
- If the node originates from HTML strings, sanitize with a vetted library before insertion.
